Test workflow

1. Upload test data
2. Explore measurements
3. Review engineering metrics
4. Investigate events
5. Export reports
6. Compare two tests

Reset analysis settings

Upload a test file

Sample Data.xlsx
1.8MB

Worksheet

Sheet1

Timestamp column

Timestamp

Observations	Numeric channels	Duration	Median sample in…
6,899	59	11.0 …	0.094 s

① Test Setup ② Visualization ③ Engineering Analytics ④ Event Intelligence ⑤ R

Test overview

Loaded: Sample Data.xlsx

Select another file above to start a new test. Engineering calculations use raw measurements, never smoothed chart values.

Available measurement groups

Group	Channels
Other	1
PD	8
PH	8
PSET	8
PWM	8
TD	8
TH	8
TSET	8
TX	2

Data quality at a glance

Valid timestamp rows: **6,899 / 6,899**

Backward timestamp movements: **0**

Duplicate elapsed timestamps: **0**

Groups are inferred from column names; channel units and engineering limits require confirmation.

Test documentation & engineering review

Optional details are stored in this browser session and included in newly generated Excel/PDF reports. They do not modify logger measurements.

Test ID

e.g. TT-2026-001

Hardware revision

Test date

yyyy / mm / dd

Test type

Not specified

Engineer name

Test objective

Device / model

Operating conditions / setup

Serial number

Engineer-entered review

These are human-authored judgments, distinct from TTIC automated observations. Approval status is a record of user selection, not a verified electronic signature.

Engineering observations

Engineering conclusion

Recommendations / follow-up actions

Review status

Draft

Reviewer / approver (optional)

Changing documentation after generating a report requires preparing the report again to capture the latest text.

> Data quality and column dictionary

> Export processed data

Current limitations: engineering thresholds remain unvalidated; Excel chart samples time points and may miss brief transients; pixel-matching to legacy Excel is not yet implemented.
